

How to use doPDF v6 Software

Tutorial prepared by: blueskytourism.com

At first download the software and install it to your computer. After install the software it will act like a printer of your system. You can see it on Control Panel→Printers that an icon showing name doPDF v6.

Now which word document you want to make PDF open that file first then do it as follows:

File→Print→select the doPDF v6 printer from name of the printer→ok→select the desire location and press Enter.

After that your word document will open on Acrobat Reader or Adobe Reader. Because, your word document has converted on PDF format.
